(54) AIR-SUPPLY AND DISCHARGING TUBE FOR FLOATING AND SINKING DEVICE PREVENTING INTRUSION OF SEA WATER

(57)Abstract:

PURPOSE:

To prevent the intrusion of sea water into a floating and sinking device to be floated or sunk by the supply or discharge of air by a method in which, the end port of an air supply and discharge tube is positioned on the sea surface and a part of the air supply and discharge tube is positioned above the end port.

CONSTITUTION:

The end of an air supply and discharge tube 9 of a floating and sinking device 1, e.g., oil fence, etc., is put on a float 8, and the end port 14 of the tube 9 is positioned on the sea surface. A part of the tube 9 is bent into an inverted U-shaped form and positioned above the end port. Since the intrusion of sea water from the end port 14 into the device 14 is prevented by the action of the bent portion 15, the failure to refloat up the device 1 can be prevented.
